## SCAMPO (*Nephrops norvegicus*)

## Our Area

In the 19th and early 20th century, Achiltibue was mostly a fishing and crofting community. Almost every homestead would grow their own 'tatties' (potatoes) and cut the peats to fuel their fires. There were few visitors then but the area has changed a lot over the years.

Achiltibue has since opened up a great deal and we are able to welcome holidaymakers to our friendly unspoilt village. Several local fishermen still land their catches daily at Old Dornie harbour. The freshly caught **Norway prawns** (Scampi) are enjoyed both at home and abroad

## Nephrops Norvegicus

Scottish *nephrops* stocks - biology and assessment

Produced by the Fisheries Research Service, an agency of the Scottish Executive Environment and Rural Affairs Department (SEERAD), in January 2003. This fact sheet provides information on stocks of *Nephrops norvegicus*, also known as langoustine, scampi, Dublin Bay prawn, and Norway lobster, in Scotland. It looks at the distribution of their burrows, lifecycle, growth and density, and how stocks are assessed. This 2 page document is provided in PDF, requiring Adobe Acrobat Reader.
